

IBM ASSIGNMENT 1

Create a RESUME PAGE Using HTML,CSS

AIM:

To Create the interactive HTML Resume page

About :

- In an the HTML page I have use the External CSS in the name of main.css I link this main.css with help of <link rel=""> tag
- In an HTML page I use 4 div tags each one is refer by the class name use of the class name I add extra attribute to the content of the pages

Tags are used in HTML page :

<link rel> - This tag use to link the external files
<title> - This tag is used for give the Tittle of the page
<div> - Div tag is used to divided (or) sperated the content
 - Image tag is used included the Image
<p> - is used for paragraph
<a href> - use to navigate
<h1> - Heading Tag used For mainly in heading
 - unorder list
<table> - Used to create table

 - Break the single line in page
<form> - To create the form
<select> - TO choose the option
<centre> - used to align content in center
<button> - To create button

CSS:

- In an css file we have add the extra attribute using the name of tag or id name or class name if its class or tag we use .class_name to give the attribute to the classes otherwise its a id then we use #id_name to give the attributes
- Attributes in the sences we have the hight,width,font_style,bgcolour,size etc...
